

Audeum Audio Drive Quick Guide

1. Plug in power supply and connect drive to computer using desired interface (USB, Firewire or e-Sata)
2. Operating system will recognize the Audiodrive as a storage device, and alert you when it's ready for use (plug & play)
3. Drive will appear as "Audeum HDD" when ready

Drives are pre-formatted as NTFS file system, single partition. Windows users can re-format or partition the drive using Windows Disk Management tool.

MAC users may need to format the Audio Drive using MAC Disk Utility to Mac OS Extended file system for the best performance and stability.

Thanks and enjoy!

The Audeum Team
